RECEIVED, INCLUDING INTERFERENCE THAT MAY
CAUSE UNDESIRE OPERATION.

Patented by Hunter

FEATURING:

- Private Security System complement for car alarm systems.
- Calls the owner's Cellphone in case of detecting an event or trigger. The owner can also send commands remotely.
- Capable of Blocking the Engine remotely or Activate the Siren with the only press of a digit in a cellular or regular phone.

 **Hunter Pro**
HIGH-LEVEL SECURITY SOLUTIONS™

At the present we know we can't trust a car alarm system only. The sound of the siren is oftenly very common and you can't tell whether is your vehicle car alarm triggered or not. That's the reason why HunterPro has developed the Cellular System **CELLPAGER™**: an add-on for the standard car alarm systems. Into its major features and functions its capable of calling the owner of the vehicle when the installed car alarm is triggered. You can also program two phone numbers (any of them can be cellular or landline phone numbers). For example: 1) the Cellular phone of the owner, and 2) the phone number of the job, etc.

CELLPAGER™, uses the cellular network as a standard and reliable communication link and can be distributed with a cellular line included. Its minimum cost will be included in the carrier's bill. In case that the **CELLPAGER™** could't communicate with the first phone programmed (landline or cellular) it will try with the second phone programmed. When the owner goes off-hook a cellular link will establish automatically and (if programmed) the cellphone will display the word «CAR». Immediately the owner can hear two different sounds if: 1) one or more doors where opened, or 2) the alarm has been triggered by a sensor or other device.

Also **CELLPAGER™** is able to identify the Personal Access Code of the owner. Followed by a digit, it will activate a unique operation. Featuring:

1) *Activate / Deactivate Events.*

-The user can select in which events he wish to be called. In case of an important meeting, the user can deactivate all calls completely and also activate the Engine Blocking device for preventing any potential robbery in the meantime. Later the user can activate again the calls and Unlock the Engine if he wish to do so.

2) *Activate / Deactivate the Engine Blocking device.*

-The user can decide in which moment he can activate the Engine Blocking device. Also he can deactivate it at any given time in order to be able to start the engine again. This is useful for any given user to prevent a potential robbery at any time, because a real-time call is made by the **CELLPAGER™** at the exact moment that the alarm is triggered.

3) *Siren Chirps mode: Hear & Locate the car.*

-In parking lots or wide open places it may be very useful to Hear & Locate the vehicle. If because of the distance

CELLPAGER™ protects you everywhere

the remote control of the car alarm won't provide this functionality, try calling your **CELLPAGER™** and selection the option Siren Chirps.

CELLPAGER™ provides a clear full-duplex communication with the car's owner. For this and for other reasons it's a complete security system, and is fully-compatible with all car security systems available in the market today or in the foreseeable future. This is because it is automatic: so simple and transparent that doesn't need any difficult installations or any programming at all. It is a piece of high-tech engineering and can be purchased at a special price. Discounts are available for distributors. This is the perfect product for the present market which is hungry for a total remote car security solution.

CELLPAGER™ is provided with its own **Cellular Transceiver** and a permanent monitoring system, which

watches for the health of internal and external conditions of the whole system. So you can be sure that everything is working correctly.

FEATURES

- ♦ Uses standard cellular services and high-priority services provided in all the country.
- ♦ Fully-compatible with **ALL** car security systems.
- ♦ Automatic monitoring of:
 - Cellular Communication
 - Microprocessors (health of the system)
- ♦ Requires no programming skill for a successful interaction with it, even with the special functions of the system.
- ♦ Very discrete installation, out of sight and hidden.

SPECIFICATIONS

Cellular Transceiver

- ♦ Uses the cellular network available in the whole country.
- ♦ Frequency Range: 880 Mhz to 889 Mhz.

Power +12 Volt

- 0.50A - transmitting
- 0.21A - idle
- ♦ RF Output: 1.5 Watts max.
